

**IMAGINE  
FINALLY  
FINDING  
RELIEF**

**A NEW CHRONIC PAIN THERAPY OFFERED  
EXCLUSIVELY BY **ST. JUDE MEDICAL**  
MAY BE RIGHT FOR YOU.**

**Dorsal root ganglion (DRG) therapy,**  
a new form of neurostimulation, is  
clinically-proven to relieve difficult-to-treat  
chronic pain of the lower limbs.

DRG therapy may be able to provide you relief if you have chronic pain associated with complex regional pain syndrome (CRPS) in any of the following areas:

- Foot pain
- Groin pain
- Ankle pain
- Hip pain
- Knee pain
- Hernia pain

While neurostimulation helps most patients receive at least some reduction in pain, not everyone responds in the same way. Complications include: painful stimulation, loss of pain relief and certain surgical risks (e.g., paralysis). Be sure to discuss the risks and benefits of neurostimulation with your doctor.

**TALK TO YOUR DOCTOR** to learn if DRG therapy can help you finally find relief.

**Rx Only**

**Brief Summary:** Prior to using these devices, please review the User's Manual for a complete listing of indications, contraindications, warnings, precautions, potential adverse events and directions for use. **Indications for Use:** Spinal column stimulation via epidural and intra-spinal lead access to the dorsal root ganglion as an aid in the management of moderate to severe chronic intractable\* pain of the lower limbs in adult patients with Complex Regional Pain Syndrome (CRPS) types I and II.\*\*

\*Study subjects from the ACCURATE clinical study had failed to achieve adequate pain relief from at least two prior pharmacologic treatments from at least two different drug classes and continued their pharmacologic therapy during the clinical study.

\*\*Please note that in 1994, a consensus group of pain medicine experts gathered by the International Association for the Study of Pain (IASP) reviewed diagnostic criteria and agreed to rename reflex sympathetic dystrophy (RSD) and causalgia, as complex regional pain syndrome (CRPS) types I and II, respectively.

**Contraindications:** Patients who are unable to operate the system, who are poor surgical risks, or who have failed to receive effective pain relief during trial stimulation. **Warnings/Precautions:** Diathermy therapy, implanted cardiac systems or other active implantable devices, magnetic resonance imaging (MRI), computed tomography (CT), electrosurgery devices, ultrasonic scanning equipment, therapeutic radiation, explosive or flammable gases, theft detectors and metal screening devices, lead movement, operation of machinery and equipment, pediatric use, pregnancy, and case damage. **Adverse Effects:** Painful stimulation, loss of pain relief, surgical risks (e.g., paralysis). Implant Manual must be reviewed for detailed disclosure. Refer to the User's Manual for detailed indications, contraindications, warnings, precautions and potential adverse events.

CAUTION: FEDERAL LAW (USA) RESTRICTS THIS DEVICE TO SALE, DISTRIBUTION AND USE BY OR ON THE ORDER OF A PHYSICIAN.
